### How do you know what is redundant?

#### Functional Dependency

A functional dependency (fd)  $X \to Y$  states that if the values of attributes X agree in two tuples, then so must the values in Y.

#### Using an FD to find a value

If the FD no  $\rightarrow$  rate holds then x in the table below must always take the value 5.25, but y and z may take any value.

bank_data								
no	<u>mid</u>	rate						
101	1001	5.25						
101	1008	x						
119	1009	y						
z	1010	5.25						

3

< ロト ( 同 ) ( 三 ) ( 三 ) ( 二 ) ( - )

# Quiz 18.1: FDs that hold in bank\_data

#### Which set of FDs below does not hold for the data?

A	В	С	D
$no \to rate$	no  o type	$no \to type$	$amount \to rate$
$no\tobname$	$bname \to no$	$mid \to bname$	$bname \to sortcode$

2

イロト イヨト イヨト イヨト

# Quiz 18.2: Deriving FDs from other FDs

 $\mathsf{sortcode} \to \mathsf{bname}$ 

- $\mathsf{no}\to\mathsf{sortcode}$
- $\mathsf{no}\to\mathsf{cname}$
- $\mathsf{no}\to\mathsf{rate}$

 $\mathsf{mid}\to\mathsf{no}$ 

Given the FDs above, which FD below might not hold?

A	В
$no \to bname$	$no, sortcode \to cname, sortcode$
С	D
amount.tdate $\rightarrow$ amount	amount.tdate $\rightarrow$ mid

2

イロト イヨト イヨト イヨト

### Armstrong's Axioms

X,Y and Z are sets of attributes, and XY is a shorthand for  $X\cup Y$ 

#### Reflexivity

 $Y \subseteq X \models X {\rightarrow} Y$ 

Such an FD is called a **trivial** FD

### Applying reflexivity

If amount,tdate are attributes By reflexivity amount  $\subseteq$  amount,tdate  $\models$  amount,tdate  $\rightarrow$  amount tdate  $\subseteq$  amount,tdate  $\models$  amount,tdate  $\rightarrow$  tdate

イロト イポト イヨト イヨト

### Armstrong's Axioms

X,Y and Z are sets of attributes, and XY is a shorthand for  $X\cup Y$ 

Augmentation

 $X \to Y \models XZ \to YZ$ 

### Applying augmentation

If no,cname,sortcode are attributes and  $\mathsf{no}\to\mathsf{cname}$ 

By augmentation

 $\mathsf{no} \rightarrow \mathsf{cname} \models \mathsf{no}, \mathsf{sortcode} \rightarrow \mathsf{cname}, \mathsf{sortcode}$ 

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

### Armstrong's Axioms

X,Y and Z are sets of attributes, and XY is a shorthand for  $X\cup Y$ 

Transitivity

 $X \to Y, Y \to Z \models X \to Z$ 

### Applying transitivity

If no  $\rightarrow$  sortcode and sortcode  $\rightarrow$  bname By transitivity

 $\mathsf{no} \rightarrow \mathsf{sortcode}, \mathsf{sortcode} \rightarrow \mathsf{bname} \models \mathsf{no} \rightarrow \mathsf{bname}$ 

イロト イロト イヨト イヨト 二日

## Union Rule

#### Armstrong's Axioms

Reflexivity:  $Y \subseteq X \models X \to Y$ Augmentation:  $X \to Y \models XZ \to YZ$ Transitivity:  $X \to Y, Y \to Z \models X \to Z$ 

#### Union Rule

If  $X \to Y, X \to Z$ If XBy augmentationBy r $X \to Y \models XZ \to YZ$ YZ $X \to Z \models X \to XZ$ By tBy transitivity $X \to XZ, XZ \to YZ \models X \to YZ$ 

If  $X \to YZ$ By reflexivity  $YZ \models YZ \to Y, YZ \to Z$ By transitivity  $X \to YZ, YZ \to Y \models X \to Y$  $X \to YZ, YZ \to Z \models X \to Z$ 

イロト イヨト イヨト イヨト

 $\therefore X \to Y, X \to Z \equiv X \to YZ$ 

• Note that the union rules means that we can restrict ourselves to FD sets containing just one attribute on the RHS of each FD without loosing expressiveness

3

# Quiz 18.3: Deriving FDs from other FDs

Given a set  $S = \{A \to BC, CD \to E, C \to F, E \to F\}$  of FDs

 $A \rightarrow BF, A \rightarrow CF, A \rightarrow ABCF$ 

 $A \rightarrow BD, A \rightarrow CF, A \rightarrow ABCF$ 

 $A \rightarrow BD, A \rightarrow BF, A \rightarrow ABCF$ 

 $A \to BD, A \to BF, A \to CF$ 

イロト イロト イヨト イヨト 二日

### Pseudotransitivity Rule

#### Armstrong's Axioms

Reflexivity:  $Y \subseteq X \models X \to Y$ Augmentation:  $X \to Y \models XZ \to YZ$ Transitivity:  $X \to Y, Y \to Z \models X \to Z$ 

#### Pseudotransitivity Rule

If  $X \to Y, WY \to Z$ By augmentation  $X \to Y \models WX \to WY$ By transitivity  $WX \to WY, WY \to Z \models WX \to Z$ 

 $\therefore X \to Y, WY \to Z \models WX \to Z$ 

イロト イロト イヨト イヨト 三日

### Decomposition Rule

#### Armstrong's Axioms

Reflexivity:  $Y \subseteq X \models X \to Y$ Augmentation:  $X \to Y \models XZ \to YZ$ Transitivity:  $X \to Y, Y \to Z \models X \to Z$ 

#### Decomposition Rule

If  $X \to Y, Z \subseteq Y$ By reflexivity  $Z \subseteq Y \models Y \to Z$ By transitivity  $X \to Y, Y \to Z \models X \to Z$ 

#### $\therefore X \to Y, Z \subseteq Y \models X \to Z$

# Topic 19: FDs and Keys

#### Super-keys and minimal keys

- If a set of attributes X in relation R functionally determines all the other attributes of R, then X must be a **super-key** of R
- If it is not possible to remove any attribute from X to form X', and X' functionally determine all attributes, then X is a **minimal key** of R

#### Determining keys of a relation

Suppose branch(sortcode, bname, cash) has the FD set {sortcode  $\rightarrow$  bname, bname  $\rightarrow$  sortcode, bname  $\rightarrow$  cash}

- $\blacksquare { sortcode, bname} is a super-key since { sortcode, bname} \rightarrow cash$
- **2** However, {sortcode, bname} is not a minimal key, since sortcode  $\rightarrow$  {bname, cash} and bname  $\rightarrow$  {sortcode, cash}
- $\blacksquare$  sortcode and bname are both minimal keys of branch

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

# Quiz 19.1: Deriving minimal keys from FDs

Suppose the relation R(A,B,C,D,E) has functional dependencies  $S=\{A\rightarrow E,B\rightarrow AC,C\rightarrow D,E\rightarrow D\}$ 

Which of the following is a minimal key?

イロト イポト イヨト イヨト 二日

# Quiz 19.2: Keys and FDs

Suppose the relation R(A, B, C, D, E) has minimal keys AC and BC

Which FD does not necessarily hold?							
А	В	C	D				
$ABC \rightarrow DE$	$AC \rightarrow BDE$	$AB \rightarrow DE$	$BC \rightarrow DE$				

2

イロト イヨト イヨト イヨト

Closure of a set of attributes with a set of FDs

### Closure $X^+$ of a set of attributes X with FDs S

**1** Set  $X^+ := X$ 

2 Starting with  $X^+$  apply each FD  $X_s \to Y$  in S where  $X_s \subseteq X^+$  but Y is not already in  $X^+$ , to find determined attributes Y

$$X^+ := X^+ \cup Y$$

- $\blacksquare If Y not empty go o (2)$
- **5** Return  $X^+$

#### Closure of attributes

Relation R(A, B, C, D, E, F) has FD set  $S = \{A \to BC, CD \to E, C \to F, E \to F\}$ To compute  $A^+$ 

- Start with  $A^+ = A$ , just  $A \to BC$  matches, so Y = BC
- $A^+ = ABC$ , just  $C \to F$  matches, so Y = F
- $A^+ = ABCF$ , no FDs apply, so we have the result

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

Closure of a set of attributes with a set of FDs

### Closure $X^+$ of a set of attributes X with FDs S

**1** Set  $X^+ := X$

- **5** Return  $X^+$

#### Closure of a set of attributes

Relation R(A, B, C, D, E, F) has FD set  $S = \{A \to BC, CD \to E, C \to F, E \to F\}$ To compute  $AD^+$ 

- Start with  $AD^+ = AD$ , just  $A \to BC$  matches, so Y = BC
- $AD^+ = ABCD, CD \rightarrow E, C \rightarrow F$  matches, so Y = EF
- $AD^+ = ABCDEF$ , no FDs apply, so we have the result

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

### Quiz 19.3: Closure of Attribute Sets

Given a relation R(A, B, C, D, E, F) and FD set  $S = \{A \rightarrow BC, C \rightarrow D, BA \rightarrow E, BD \rightarrow F, EF \rightarrow B, BE \rightarrow ABC\}$ 

Which closure of attributes of S does not cover R?

### Closure of a set of Functional Dependencies

The **closure**  $S^+$  of a set of FDs S is the set of all FDs that can be inferred from S. For speed, we ignore:

- trivial FDs (e.g. ignore  $A \to A$ )
- FDs with a LHS that is not minimal (e.g. ignore  $AB \to C$  if  $A \to C$ )
- FDs that have multiple attributes on RHS (*e.g.* consider  $A \to CD$  as  $A \to C$  and  $A \to D$ )

FDs and Keys Closure

### Closure of a set of Functional Dependencies

The **closure**  $S^+$  of a set of FDs S is the set of all FDs that can be inferred from S. For speed, we ignore:

- trivial FDs (e.g. ignore  $A \to A$ )
- FDs with a LHS that is not minimal (e.g. ignore  $AB \to C$  if  $A \to C$ )
- FDs that have multiple attributes on RHS (*e.g.* consider  $A \to CD$  as  $A \to C$  and  $A \to D$ )

 $S = \{A \to B, A \to C, B \to A, B \to D\}$ 

The **closure**  $S^+$  of a set of FDs S is the set of all FDs that can be inferred from S. For speed, we ignore:

- trivial FDs (e.g. ignore  $A \to A$ )
- FDs with a LHS that is not minimal (e.g. ignore AB → C if A → C)
- FDs that have multiple attributes on RHS (*e.g.* consider  $A \to CD$  as  $A \to C$  and  $A \to D$ )

$$S = \{A \to B, A \to C, B \to A, B \to D\}$$
$$A \to B, B \to D \models A \to D$$
$$Y = \{A \to B, A \to C, A \to D, B \to A, B \to D\}$$

3

The closure  $S^+$  of a set of FDs S is the set of all FDs that can be infered from S. For speed, we ignore: • trivial FDs (e.g. ignore  $A \to A$ ) • FDs with a LHS that is not minimal (e.g. ignore  $AB \to C$  if  $A \to C$ ) • FDs that have multiple attributes on RHS (e.g. consider  $A \to CD$  as  $A \to C$  and  $A \to D$ ) •  $S^+ = \{A \to B, A \to C, A \to D, B \to A, B \to C, B \to D\}$ 

イロト 不得 トイヨト イヨト

The closure  $S^+$  of a set of FDs S is the set of all FDs that can be infered from S. For speed, we ignore: • trivial FDs (e.g. ignore  $A \to A$ ) • FDs with a LHS that is not minimal (e.g. ignore  $AB \to C$  if  $A \to C$ ) • FDs that have multiple attributes on RHS (e.g. consider  $A \to CD$  as  $A \to C$  and  $A \to D$ )  $S^+ = \{A \to B, A \to C, A \to D, B \to A, B \to C, B \to D\}$ 

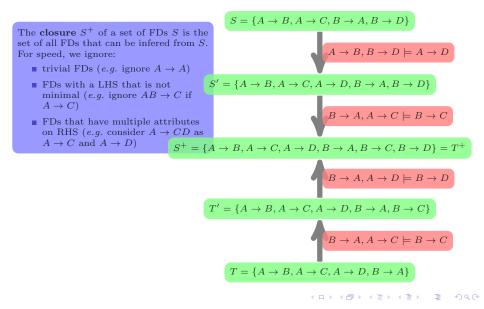

#### $T = \{A \to B, A \to C, A \to D, B \to A\}$

イロト 不得 トイヨト イヨト

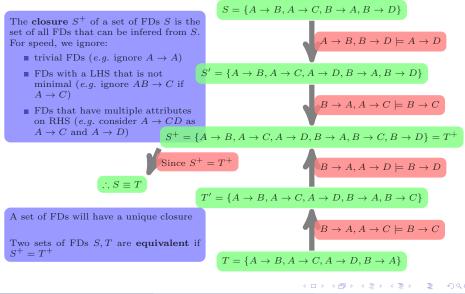

The closure  $S^+$  of a set of FDs S is the set of all FDs that can be infered from S. For speed, we ignore: • trivial FDs (e.g. ignore  $A \to A$ ) • FDs with a LHS that is not minimal (e.g. ignore  $AB \to C$  if  $A \to C$ ) • FDs that have multiple attributes on RHS (e.g. consider  $A \to CD$  as  $A \to C$  and  $A \to D$ ) •  $S^+ = \{A \to B, A \to C, A \to D, B \to A, B \to C, B \to D\}$ 

$$T' = \{A \to B, A \to C, A \to D, B \to A, B \to C\}$$
$$B \to A, A \to C \models B \to C$$
$$T = \{A \to B, A \to C, A \to D, B \to A\}$$

# Closure of a set of Functional Dependencies

# Closure of a set of Functional Dependencies

A minimal cover  $S_c$  of FD set S has the properties that:

- All the FDs in S can be derived from  $S_c$  (*i.e.*  $S^+ = S_c^+$ )
- It is not possible to form a new set  $S'_c$  by deleting an FD from  $S_c$  or deleting an attribute from an FD in  $S_c$ , and  $S'_c$  can still derive all the FDs in S

In general, a set of FDs may have more than one minimal cover

A minimal cover  $S_c$  of FD set S has the properties that:

- All the FDs in S can be derived from  $S_c$  (*i.e.*  $S^+ = S_c^+$ )
- It is not possible to form a new set  $S'_c$  by deleting an FD from  $S_c$  or deleting an attribute from an FD in  $S_c$ , and  $S'_c$  can still derive all the FDs in S

In general, a set of FDs may have more than one minimal cover

 $S = \{A \rightarrow B, BC \rightarrow A, A \rightarrow C, B \rightarrow C\}$ 

A minimal cover  $S_c$  of FD set S has the properties that:

- All the FDs in S can be derived from  $S_c$  (*i.e.*  $S^+ = S_c^+$ )
- It is not possible to form a new set  $S'_c$  by deleting an FD from  $S_c$  or deleting an attribute from an FD in  $S_c$ , and  $S'_c$  can still derive all the FDs in S

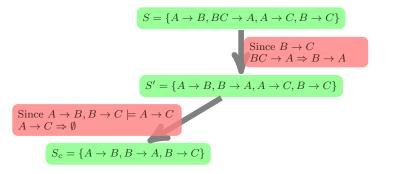

In general, a set of FDs may have more than one minimal cover

$$S = \{A \to B, BC \to A, A \to C, B \to C\}$$
  
Since  $B \to C$   
 $BC \to A \Rightarrow B \to A$   
 $S' = \{A \to B, B \to A, A \to C, B \to C\}$ 

A minimal cover  $S_c$  of FD set S has the properties that:

- All the FDs in S can be derived from  $S_c$  (*i.e.*  $S^+ = S_c^+$ )
- It is not possible to form a new set  $S'_c$  by deleting an FD from  $S_c$  or deleting an attribute from an FD in  $S_c$ , and  $S'_c$  can still derive all the FDs in S

In general, a set of FDs may have more than one minimal cover

A minimal cover  $S_c$  of FD set S has the properties that:

- All the FDs in S can be derived from  $S_c$  (*i.e.*  $S^+ = S_c^+$ )
- It is not possible to form a new set  $S'_c$  by deleting an FD from  $S_c$  or deleting an attribute from an FD in  $S_c$ , and  $S'_c$  can still derive all the FDs in S

In general, a set of FDs may have more than one minimal cover

$$S = \{A \rightarrow B, BC \rightarrow A, A \rightarrow C, B \rightarrow C\}$$
  
Since  $B \rightarrow C$   
 $BC \rightarrow A \Rightarrow B \rightarrow A$   
$$S' = \{A \rightarrow B, B \rightarrow A, A \rightarrow C, B \rightarrow C\}$$
  
Since  $A \rightarrow B, B \rightarrow C \models A \rightarrow C$   
 $A \rightarrow C \Rightarrow \emptyset$   
Since  $A \rightarrow B, B \rightarrow C \models A \rightarrow C$   
 $S_c = \{A \rightarrow B, B \rightarrow A, B \rightarrow C\}$   
Since  $A \rightarrow B, B \rightarrow A, A \rightarrow C$   
 $S_c = \{A \rightarrow B, B \rightarrow A, B \rightarrow C\}$   
Since  $A \rightarrow B, B \rightarrow A, A \rightarrow C$ 

3

# Worksheet: Minimal Cover (Step 3)

 $AB^+ = ABDEHGFC$ Try removing  $AB \to D$ : find  $AB^+ = ABEH$ , so can't remove. Try removing  $AB \to E$ : find  $AB^+ = ABDHEGFC$ , so remove it from S'' to get S''' Try removing  $AB \to H$ : find  $AB^+ = ABDEGFHC$ , so remove it from S''' to get  $S'''' = \{AB \rightarrow D, EF \rightarrow A, FG \rightarrow C, D \rightarrow E, D \rightarrow G, EG \rightarrow B, EG \rightarrow F, F \rightarrow B, F \rightarrow B,$ H $EF^+ = EFABHDGC$ Try removing  $EF \to A$ : find  $EF^+ = EFBH$ , so can't remove.  $FG^+ = FGCBH$ Try removing  $FG \to C$ : find  $FG^+ = FGBH$ , so can't remove.  $D^+ = DEGBFHAC$ Try removing  $D \to E$ : find  $D^+ = DG$ , so can't remove. Try removing  $D \to G$ : find  $D^+ = DE$ , so can't remove. **5**  $EG^+ = EGBFHADC$ Try removing  $EG \to B$ : find  $EG^+ = EGFBHADC$ , so remove it from S'''' to get S''''' Try removing  $EG \to F$ : find  $EG^+ = EG$ , so can't remove.  $F^+ = FBH$ Try removing  $F \to B$ : find  $F^+ = FH$ , so can't remove. Try removing  $F \to H$ : find  $F^+ = FB$ , so can't remove. Thus S''''' is a minimal cover

# Is bank\_data in 1st Normal form? True False

2

# Prime and Non-Prime Attributes

#### Prime Attribute

An attribute A of relation R is **prime** if there is some minimal candidate key X of R such that  $A \subseteq X$ Any other attribute  $B \in Attrs(R)$  is **non-prime** 

#### Prime and non-prime attributes of bank\_data

 $\label{eq:bank_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate) \\ Has FDs mid \rightarrow \{tdate, amount, no\}, no \rightarrow \{type, cname, rate, sortcode\}, \\ \{cname, type\} \rightarrow no, \ sortcode \rightarrow \{bname, cash\}, \ bname \rightarrow sortcode \\ Then \\ \end{cases}$ 

- **1** the only minimal candidate key is mid
- **2** the only prime attribute is mid
- non-prime attributes are no,sortcode,bname,cash,type,cname,rate,amount,tdate

# Quiz 20.2: Prime and nonprime attributes

Given a relation R(A, B, C, D, E, F) and an FD set  $A \rightarrow BCE, C \rightarrow D, BD \rightarrow F, EF \rightarrow B, BE \rightarrow A$ 

А		
DEF		
В		
B BC		
C CDF		
D		
CD		

イロト イロト イヨト イヨト 二日

# 3rd Normal Form (3NF)

### 3rd Normal Form (3NF)

For every non-trivial FD  $X \to A$  on R, either

- **1** X is a super-key
- 2 A is prime

Every non-key attribute depends on the key, the whole key and nothing but the key

# Failure of bank\_data to meet 3NF

bank\_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate)

- Has the following FDs where the LHS is not a super-key: no → {type, cname, rate, sortcode}, {cname, type} → no, sortcode → {bname, cash}, bname → sortcode
- Each of the above FD causes the relation not to meet 3NF since the RHS contains non-prime attributes

# Quiz 20.3: 3rd Normal Form

Given a relation R(A, B, C, D, E, F) and an FD set  $A \rightarrow BCE, C \rightarrow D, BD \rightarrow F, EF \rightarrow B, BE \rightarrow A$ 

Which decomposition is not in 3NF?

 $R_1(B, D, F), R_2(A, B, C, D, E)$ 

#### В

 $R_1(A, B, C, E, F), R_2(C, D)$ 

#### C

 $R_1(A, B, C, E, F), R_2(C, D), R_3(B, D, F)$ 

#### D

 $R_1(B, E, F), R_2(A, C, E), R_3(C, D)$ 

# Boyce-Codd Normal Form (BCNF)

# Boyce-Codd Normal Form (BCNF)

For every non-trivial FD  $X \to A$  on R, X is a super-key. Every attribute depends on the key, the whole key and nothing but the key

#### BCNF schema

branch(sortcode, bname, cash) with FDs sortcode  $\rightarrow$  {bname, cash}, bname  $\rightarrow$  sortcode is in BCNF since sortcode and bname are both candidate keys

account(no, type, cname, rate, sortcode) with FDs no  $\rightarrow$  {type, cname, rate, sortcode},  $\{cname, type\} \rightarrow no is in BCNF since no and cname, type are both candidate keys$ 

movement(mid, amount, no, tdate) with FD mid  $\rightarrow$  {tdate, amount, no} is in BCNF since mid is key

# Lossless-join decomposition of relations

# Lossless-join decomposition of a Relation

A lossless-join decomposition of a relation R with respect to FDs S into relations  $R_1, \ldots, R_n$  has the properties that:

- $Attrs(R_1) \cup \ldots \cup Attrs(R_n) = Attrs(R)$
- For all possible extents of R satisfying S,  $\pi_{Attrs(R_1)} R \bowtie \ldots \bowtie \pi_{Attrs(R_n)} R = R$

# Lossless-join decomposition of bank\_data

bank\_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate)

 $\label{eq:has FDs mid} \begin{array}{l} \blacksquare \ \mathrm{Has \ FDs \ mid} \rightarrow \{\mathsf{tdate}, \mathsf{amount}, \mathsf{no}\}, \ \mathsf{no} \rightarrow \{\mathsf{type}, \mathsf{cname}, \mathsf{rate}, \mathsf{sortcode}\}, \\ \{\mathsf{cname}, \mathsf{type}\} \rightarrow \mathsf{no}, \ \mathsf{sortcode} \rightarrow \{\mathsf{bname}, \mathsf{cash}\}, \ \mathsf{bname} \rightarrow \mathsf{sortcode} \end{array}$ 

 Decomposing bank\_data into branch = π<sub>sortcode,bname,cash</sub> bank\_data account = π<sub>no,type,cname,rate,sortcode</sub> bank\_data movement = π<sub>mid,amount,no,tdate</sub> bank\_data satisfies the lossless-join decomposition property

 $R_1(B, E, F), R_2(A, C, E), R_3(C, D)$ 

3

# Worksheet: Lossless Join Decomposition

- **1** R(A, B, C, D, E) has the FDs  $S = \{AB \to C, C \to DE, E \to A\}$ . Which of the following are lossless join decompositions?
  - $\mathbb{1}$   $R_1(A, B, C), R_2(C, D, E)$
  - **2**  $R_1(A, B, C), R_2(C, D), R_3(D, E)$
- 2 Derive a lossless join decomposition into three relations of R(A, B, C, D, E, F)with FDs  $S = \{AB \rightarrow CD, C \rightarrow E, A \rightarrow F\}.$
- **3** Derive a lossless join decomposition into three relations of R(A, B, C, D, E, F) with FDs  $S = \{AB \to CD, C \to E, F \to A\}$ .

・ロト ・四ト ・ヨト ・ヨト - ヨ

# Topic 21: Generating 3NF and BCNF Schemas

#### P.J. McBrien

Imperial College London

# Generating 3NF

#### Generating 3NF

- **I** Given R and a set of FDs S, find an FD  $X \to A$  that causes R to violate 3NF (*i.e.* for which A is not a prime attribute and X is not a superkey).
- **2** Decompose R into  $R_a(Attr(R) A)$  and  $R_b(XA)$  (Note because the two relations share X and  $X \to A$  this is lossless)
- **3** Project the S onto the new relations, and repeat the process from (1)

Note that step (2) ensures that the decomposition is lossless since joining  $R_a$  with  $R_b$  will share X, and  $X \to A$ 

#### Canonical Example of 3NF Decomposition

Suppose R(A, B, C) has FD set  $S = \{A \to B, B \to C\}$ 

- The only key is A, and so  $B \to C$  violates 3NF (since B is not a superkey and C is nonprime).
- Decomposing R into  $R_1(A, B)$  and  $R_2(B, C)$  results in two 3NF relations.

< ロ > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < 回 > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > <

# Example: Decomposing bank\_data into 3NF

# Bank Database as a Single Relation

 $\begin{aligned} & \mathsf{bank\_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate)} \\ S = \{\mathsf{mid} \rightarrow \{\mathsf{tdate,amount,no}\}, \mathsf{no} \rightarrow \{\mathsf{type},\mathsf{cname},\mathsf{rate},\mathsf{sortcode}\}, \\ & \{\mathsf{cname},\mathsf{type}\} \rightarrow \mathsf{no},\mathsf{sortcode} \rightarrow \{\mathsf{bname},\mathsf{cash}\},\mathsf{bname} \rightarrow \mathsf{sortcode}\} \end{aligned}$ 

# Example: Decomposing bank\_data into 3NF

# Bank Database as a Single Relation

 $\begin{aligned} & \mathsf{bank\_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate)} \\ S = \{\mathsf{mid} \rightarrow \{\mathsf{tdate},\mathsf{amount},\mathsf{no}\},\mathsf{no} \rightarrow \{\mathsf{type},\mathsf{cname},\mathsf{rate},\mathsf{sortcode}\},\\ & \{\mathsf{cname},\mathsf{type}\} \rightarrow \mathsf{no},\mathsf{sortcode} \rightarrow \{\mathsf{bname},\mathsf{cash}\},\mathsf{bname} \rightarrow \mathsf{sortcode}\} \end{aligned}$ 

Since sortcode  $\rightarrow$  {bname, cash} and sortcode is not superkey and bname, cash nonprime, we should decompose bank\_data into

- $1 \ \text{branch}(\text{sortcode}, \text{bname}, \text{cash}) \ \text{with FDs sortcode} \rightarrow \{\text{bname}, \text{cash}\}, \\ \text{bname} \rightarrow \text{sortcode}$
- $\begin{array}{ll} 2 \;\; \mathsf{bank\_data'}(\mathsf{no},\mathsf{sortcode},\mathsf{type},\mathsf{cname},\mathsf{rate},\mathsf{mid},\mathsf{amount},\mathsf{tdate}) \;\; \mathsf{with} \; \mathrm{FDs} \\ \mathsf{mid} \to \{\mathsf{tdate},\mathsf{amount},\mathsf{no}\}, \; \mathsf{no} \to \{\mathsf{type},\mathsf{cname},\mathsf{rate},\mathsf{sortcode}\}, \\ \{\mathsf{cname},\mathsf{type}\} \to \mathsf{no} \end{array}$

<ロト <回ト < 回ト < 回ト < 回ト = 三</p>

# Example: Decomposing bank\_data into 3NF

# Bank Database as a Single Relation

 $\begin{aligned} & \mathsf{bank\_data(no,sortcode,bname,cash,type,cname,rate,mid,amount,tdate)} \\ S = \{\mathsf{mid} \rightarrow \{\mathsf{tdate},\mathsf{amount},\mathsf{no}\},\mathsf{no} \rightarrow \{\mathsf{type},\mathsf{cname},\mathsf{rate},\mathsf{sortcode}\},\\ & \{\mathsf{cname},\mathsf{type}\} \rightarrow \mathsf{no},\mathsf{sortcode} \rightarrow \{\mathsf{bname},\mathsf{cash}\},\mathsf{bname} \rightarrow \mathsf{sortcode}\} \end{aligned}$ 

Since sortcode  $\to$  {bname, cash} and sortcode is not superkey and bname, cash nonprime, we should decompose bank\_data into

- $1 \ \text{branch}(\text{sortcode},\text{bname},\text{cash}) \ \text{with FDs sortcode} \rightarrow \{\text{bname},\text{cash}\}, \\ \text{bname} \rightarrow \text{sortcode}$
- $\begin{array}{ll} 2 \;\; \mathsf{bank\_data'(no, sortcode, type, cname, rate, mid, amount, tdate) \;\; with \; FDs \\ mid \rightarrow \{ \mathsf{tdate, amount, no} \}, \; \mathsf{no} \rightarrow \{ \mathsf{type, cname, rate, sortcode} \}, \\ \{ \mathsf{cname, type} \} \rightarrow \mathsf{no} \end{array}$

branch is in 3NF, but  $no \rightarrow \{type, cname, rate, sortcode\}$  makes bank\_data' violate 3NF, so we should decompose bank\_data' into:

- 3 account(no, type, cname, rate, sortcode) with FDs
  - $\mathsf{no} \rightarrow \{\mathsf{type}, \mathsf{cname}, \mathsf{rate}, \mathsf{sortcode}\}, \, \{\mathsf{cname}, \mathsf{type}\} \rightarrow \mathsf{no}$
- $4 \hspace{0.1 cm} \texttt{movement}(\mathsf{mid}.\mathsf{amount},\mathsf{no},\mathsf{tdate}) \hspace{0.1 cm} \texttt{with} \hspace{0.1 cm} FD \hspace{0.1 cm} \mathsf{mid} \rightarrow \{\mathsf{tdate},\mathsf{amount},\mathsf{no}\}$

The relations branch, account, and movement are all in 3NF

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

э

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

# FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

#### FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

$$\blacksquare S^+ = \{A \to B, A \to C, B \to A, B \to C, C \to A, C \to B\}$$

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

#### FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

- $\bullet S^+ = \{A \to B, A \to C, B \to A, B \to C, C \to A, C \to B\}$
- The projection of  $S^+$  onto  $R_a$  gives  $S_a^+ = \{A \to B, B \to A\}$

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

#### FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

- $\bullet S^+ = \{A \to B, A \to C, B \to A, B \to C, C \to A, C \to B\}$
- The projection of  $S^+$  onto  $R_a$  gives  $S_a^+ = \{A \to B, B \to A\}$
- The projection of  $S^+$  onto  $R_b$  gives  $S_b^+ = \{B \to C, C \to B\}$

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

#### FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

- $\bullet S^+ = \{A \to B, A \to C, B \to A, B \to C, C \to A, C \to B\}$
- The projection of  $S^+$  onto  $R_a$  gives  $S_a^+ = \{A \to B, B \to A\}$
- The projection of  $S^+$  onto  $R_b$  gives  $S_b^+ = \{B \to C, C \to B\}$
- Note that the union  $S_u$  of the two subsets of  $S^+$  (*i.e.*  $S_u = S_a^+ \cup S_b^+$ ) has the property that  $S_u^+ = S^+$ , and hence the decomposition preserves functional dependencies.

#### FD preserving decomposition

A lossless decomposition of R with FDs S into  $R_a$  and  $R_b$  preserves functional dependencies S if the projection of  $S^+$  onto  $R_a$  and  $R_b$  is equivalent to S

#### FD preserving decomposition

Suppose R(ABC) with  $S = \{A \to B, B \to C, C \to A\}$  is decomposed into  $R_a(AB)$  and  $R_b(BC)$ .

- $\blacksquare S^+ = \{A \to B, A \to C, B \to A, B \to C, C \to A, C \to B\}$
- The projection of  $S^+$  onto  $R_a$  gives  $S_a^+ = \{A \to B, B \to A\}$
- The projection of  $S^+$  onto  $R_b$  gives  $S_b^+ = \{B \to C, C \to B\}$
- Note that the union  $S_u$  of the two subsets of  $S^+$  (*i.e.*  $S_u = S_a^+ \cup S_b^+$ ) has the property that  $S_u^+ = S^+$ , and hence the decomposition preserves functional dependencies.

#### 3NF

There is always possible to decompose a relation into 3NF in a manner that preserves functional dependencies. Thus any *good* 3NF decomposition of a relation must also preserve functional dependencies.

Given a relation R(A, B, C, D, E, F) and an FD set  $A \rightarrow BCE, C \rightarrow D, BD \rightarrow F, EF \rightarrow B, BE \rightarrow A$ 

 $R_1(B, D, F), R_2(A, B, C, D, E)$ 

 $R_1(A, B, C, E, F), R_2(C, D)$ 

 $R_1(A, B, C, E, F), R_2(C, D), R_3(B, D, F)$ 

#### D

 $R_1(B, E, F), R_2(A, C, E), R_3(C, D)$ 

3

# Preserving FDs, lossless join, and 3NF

Given a relation R(A, B, C, D, E, F) and an FD set  $A \rightarrow BCE, C \rightarrow D, BD \rightarrow F, EF \rightarrow B, BE \rightarrow A$ 

Decomposition	lossless join	3NF	Preserves FDs
$R_1(B, D, F), R_2(A, B, C, D, E)$	1	X	X
$R_1(A, B, C, E, F), R_2(C, D)$	1	1	X
$R_1(A, B, C, E, F), R_2(C, D), R_3(B, D, F)$	1	1	$\checkmark$
$R_1(B, E, F), R_2(A, C, E), R_3(C, D)$	X	1	X

#### Decomposing to 3NF

Since it is always possible to decompose a relation into a 3NF form that is both a lossless join decomposition, and preserves FDs, you should always do so.

Suppose the relation R(A, B, C, D, E) has functional dependencies  $S = \{AC \to DBE, BC \to DE, B \to A, E \to D\}$  (and hence has minimal keys ACand BC)

Which is a lossless join decomposition to 3NF that preserves FDs?

А	В
$R_a(B,C,E), R_b(A,B,C), R_c(D,E)$	$R_a(A, B, C), R_b(A, C, D, E)$
С	D

3

Suppose the relation R(A, B, C, D, E) has functional dependencies  $S = \{AC \to DBE, BC \to DE, B \to A, E \to D\}$  (and hence has minimal keys ACand BC)

Which is a lossless join decomposition to 3NF that preserves FDs?

А	В
$R_a(B,C,E), R_b(A,B,C), R_c(D,E)$	$R_a(A, B, C), R_b(A, C, D, E)$
C	D
С	D

#### Minimal Cover of S

Because  $BC \to E, E \to D \models BC \to D$  $S \equiv \{AC \to DBE, BC \to E, B \to A, E \to D\}$ 

Suppose the relation R(A, B, C, D, E) has functional dependencies  $S = \{AC \to DBE, BC \to DE, B \to A, E \to D\}$  (and hence has minimal keys ACand BC)

Which is a lossless join decomposition to 3NF that preserves FDs?

Α	В
$R_a(B,C,E), R_b(A,B,C), R_c(D,E)$	$R_a(A, B, C), R_b(A, C, D, E)$
С	D

#### Minimal Cover of S

Because  $BC \to E, E \to D \models BC \to D$   $S \equiv \{AC \to DBE, BC \to E, B \to A, E \to D\}$ Because  $AC \to E, E \to D \models AC \to D$  $S \equiv \{AC \to BE, BC \to E, B \to A, E \to D\}$ 

Suppose the relation R(A, B, C, D, E) has functional dependencies  $S = \{AC \to DBE, BC \to DE, B \to A, E \to D\}$  (and hence has minimal keys ACand BC)

A	В
$R_a(B,C,E), R_b(A,B,C), R_c(D,E)$	$R_a(A, B, C), R_b(A, C, D, E)$
С	D
$R_a(A, C, D), R_b(A, C, E), R_c(A, B)$	$R_a(A, C, E), R_b(B, D, E)$

Because  $BC \to E, E \to D \models BC \to D$  $S \equiv \{AC \to DBE, BC \to E, B \to A, E \to D\}$ Because  $AC \to E, E \to D \models AC \to D$  $S \equiv \{AC \to BE, BC \to E, B \to A, E \to D\}$ Because  $AC \to B, BC \to E \models AC \to E$  $S \equiv S_c = \{AC \rightarrow B, BC \rightarrow E, B \rightarrow A, E \rightarrow D\}$ 

# Decomposition of Relations into BCNF

# Generating BCNF

- **I** Given R and a set of FDs S, find an FD  $X \to A$  that causes R to violate BCNF (*i.e.* for which X is not a superkey).
- **2** Decompose R into  $R_a(Attr(R) A)$  and  $R_b(XA)$  (Note because the two relations share X and  $X \to A$  this is lossless)
- **3** Project the S onto the new relations, and repeat the process from (1)

# Difference between 3NF and BCNF

Suppose the relation address(no, street, town, county, postcode) has FDs {no, street, town, county}  $\rightarrow$  postcode, postcode  $\rightarrow$  {street, town, county},

- The relation is in 3NF (alternative keys no, street, town, county and no, postcode).
- The relation is not in BCNF since  $postcode \rightarrow \{street, town, county\}$  has a non-superkey as the determinant
  - Decompose the relation address on postcode → {street, town, county} to: postcode(postcode, street, town, county) streetnumber(no, postcode)
  - Note FD {no, street, town, county}  $\rightarrow$  postcode cannot be projected over the relations.

# Worksheet: Decomposing to Normal Forms

- $S_c = \{AB \to D, EF \to A, FG \to C, D \to EG, EG \to F, F \to BH\}$ 
  - **1** Decompose the relation into 3NF
  - **2** Decompose the relation into BCNF
  - **E** Determine if your decompositions in (1) and (2) preserve FDs, and if they do not, suggest how to amend you schema to preserve FDs.
